

Support & Data Deletion Policy

Last Updated: 8 July 2026

Support

Wingman is actively maintained, and we welcome reports of bugs, feature requests and general feedback.

Support requests may be submitted using the contact details provided within the App or on the official Wingman website.

When reporting an issue, please include where possible:

- the Wingman version;
 - your device model;
 - your iOS version;
 - a description of the issue;
 - steps to reproduce the problem;
 - screenshots, if appropriate.
-

Bug Reports

Because Wingman interprets roster information provided by third parties, occasional parsing issues may occur.

If you believe your roster has been interpreted incorrectly, please report the issue rather than relying on incorrect information.

We aim to investigate reported issues as quickly as reasonably possible.

Local Data

Current versions of Wingman store roster information locally on your device.

You may delete your information at any time by:

- deleting individual rosters within the App;
- resetting the application's stored data (if available); or
- uninstalling the App.

Removing the App may permanently delete locally stored information unless separately backed up through your device.

Future Cloud Synchronisation

Future versions of Wingman may offer optional cloud synchronisation.

If enabled, users will be able to request deletion of cloud-stored information through the App or by contacting support.

Where legally required, deletion requests will be processed within a reasonable timeframe.

Some information may be retained where required by law or to resolve security, fraud or legal issues.

Response Times

While we aim to respond promptly, support availability may vary.

Wingman does not guarantee specific response times.

Policy Updates

This policy may be updated from time to time as Wingman evolves.

The latest version will always be available within the App or on the official Wingman website.
