

Wingman Operational Use Policy

Last Updated: 8 July 2026

Purpose

Wingman is designed to help airline crew organise, interpret and analyse roster information in a simple and efficient way.

The App is intended to reduce the administrative effort involved in managing roster information by presenting it in a more accessible format and providing useful calculations, statistics and productivity tools.

Wingman is an informational aid. It is not an operational aviation system.

What Wingman Is

Wingman is designed to:

- Import compatible roster information.
- Display duties, flights, training and other roster events.
- Present roster information in an easy-to-read format.
- Calculate estimated duty, flight and pay information.
- Track roster history and statistics.
- Help users understand trends within their roster.
- Provide productivity features for managing roster information.

Wingman aims to make roster information easier to understand—not to replace official company systems.

What Wingman Is Not

Wingman is **not**:

- an official airline application;
- an operational flight planning system;
- a dispatch system;
- an electronic flight bag (EFB);
- a fatigue management system;
- a regulatory compliance tool;
- a payroll system;
- a legal record of employment;
- a source of operational approval.

Wingman does not authorise, approve or validate any operational decision.

Official Information Always Takes Priority

Your employer's official systems remain the authoritative source for all operational and employment information.

This includes, but is not limited to:

- roster changes;
- reporting times;
- flight assignments;
- aircraft allocations;
- training events;
- standby duties;
- leave;
- payroll;
- allowances;
- company notices;
- operational communications.

If information displayed in Wingman differs from official company information, you should always rely on the official company information.

Calculations and Estimates

Wingman performs calculations based on imported roster information and user settings.

These calculations—including pay estimates, duty summaries, flight statistics and other analytical information—are provided for convenience only.

Actual payroll, allowances, duty credit and operational records are determined by your employer and may differ from Wingman's calculations.

Roster Imports

Wingman interprets roster information automatically.

Although significant effort is made to ensure compatibility and accuracy, imported information may occasionally be affected by:

- airline roster format changes;
- incomplete source information;
- parser limitations;
- software defects;
- unsupported roster variations.

Users should review imported rosters after each import to ensure that duties and events have been interpreted correctly.

Operational Responsibility

Using Wingman does not transfer responsibility for operational decisions.

You remain solely responsible for:

- complying with aviation regulations;
- complying with employer policies;
- confirming roster changes;
- checking operational notices;
- ensuring you report for duty correctly;
- confirming duty limitations;
- reviewing fatigue requirements;
- verifying payroll information.

Wingman assists with information management but does not replace professional judgement or official company procedures.

Software Updates

Airline systems evolve over time.

Occasionally, changes to roster formats or operational systems may temporarily affect Wingman's ability to correctly interpret imported information until an update is released.

Where possible, updates will be provided promptly.

Reporting Issues

If you identify information that appears incorrect, we encourage you to report it through the support channels provided within the App.

User feedback plays an important role in improving parser accuracy and ensuring Wingman remains reliable for all users.

Our Commitment

We are committed to:

- continually improving Wingman;
- responding to reported issues;
- maintaining transparency about known limitations;
- protecting user privacy;
- providing a reliable and professional experience.

We believe software should support pilots—not replace the official systems, procedures and professional judgement that safe operations depend upon.

A Shared Responsibility

Wingman is built by a pilot, for pilots.

Our goal is to make roster management faster, clearer and more useful while respecting the importance of accurate operational information.

By using Wingman responsibly and continuing to verify important information through your employer's official systems, you help ensure that Wingman remains a valuable companion rather than a substitute for the systems that govern flight operations.
