

Support & Data Deletion Policy

Last Updated: 7 September 2026

Support

Wingman welcomes bug reports, parser reports, privacy requests, feature requests and general feedback. Requests may be submitted using the support options in the App or by email.

When reporting a technical issue, include the App version, device model, operating-system version, a description, steps to reproduce and screenshots where appropriate. Only include roster files or personal information when relevant and when you are authorised to provide them.

Connected Data

Wingman may store information locally and, for signed-in or connected features, through Firebase or other cloud providers. Cloud information can include account, profile, roster, device-sync, payslip, privacy, friendship, matching and support-related records. The categories and purposes are described more fully in the Privacy Policy.

Deleting Local Information

Available App controls may allow you to delete individual rosters or other items. Signing out on mobile removes account data inherited by that mobile installation. Uninstalling the App generally removes local App data from that device. Device backups or exported copies are controlled separately by you or the relevant platform provider.

Deleting local information is not always the same as deleting synchronised cloud information. An authorised master-device deletion may be propagated through sync, while a local deletion made while signed out or with cloud sync disabled may remain only on that device or be resolved under Wingman's conflict rules.

Deleting a Wingman Account

You may request deletion through available account controls or by contacting support at the address below. We may ask you to verify ownership of the account.

Deleting the Firebase Authentication user is intended to trigger cleanup of account-linked cloud information, including the user's private records, public profile, Wingman User ID registry entries, friendships and requests, pairing records, crew-flight memberships and matching state. Cleanup may take a reasonable time and may be retried if a provider operation fails.

Deleting a user directly in the Firebase console is an administrative action and should trigger the same backend cleanup when the deployed deletion function is active. It does not erase data stored locally on devices that are offline or no longer connected; those devices should also be signed out, reset or uninstalled as appropriate.

Retention and Exceptions

Some information may remain temporarily in encrypted backups, provider logs, security records or systems needed to prevent fraud, resolve disputes or comply with law. Support correspondence may be retained where reasonably necessary to handle the request and maintain an audit trail.

Aggregated or de-identified information that no longer reasonably identifies an individual may be retained and used for statistics, research and service improvement as described in the Privacy Policy.

Response and Contact

We aim to respond within a reasonable period but do not guarantee a specific response time. Support, privacy and deletion requests may be sent to yan.shurunov@gmail.com.

Policy Updates

This policy may be updated as Wingman's storage, account and connected services evolve. The current version is available within the App.
