

Wingman Operational Use Policy

Last Updated: 7 September 2026

Purpose

Wingman helps airline crew organise, interpret and analyse roster information and may provide calculations, statistics, synchronisation, sharing, matching and connected productivity features. Wingman is an informational aid. It is not an operational aviation system.

What Wingman Is

Wingman is designed to import compatible roster information; display duties, flights, training and other events; estimate duty, flight and pay information; maintain history and statistics; and provide tools that make roster information easier to understand and manage.

What Wingman Is Not

Wingman is not an official airline app, flight-planning or dispatch system, electronic flight bag, safety or fatigue-management system, regulatory-compliance tool, payroll system, legal employment record or source of operational approval. It does not authorise, approve or validate an operational decision.

Official Information Always Takes Priority

Your employer's official systems remain authoritative for roster changes, reporting times, assignments, aircraft allocations, training, standby, leave, payroll, allowances, notices and operational communications. If Wingman differs from an official source, rely on the official source.

Calculations and Estimates

Pay estimates, duty summaries, flight statistics, matches and other analytical information are provided for convenience. Actual payroll, allowances, duty credit and operational records are determined by your employer and may differ.

Roster Imports and Connected Information

Roster imports may be affected by airline format changes, incomplete source information, parser limitations, unsupported variations or software defects. Connected information may also be affected by network outages, stale device receipts, conflicting edits, third-party service interruptions, privacy changes or delayed updates.

Crew or friend matches indicate only that available data met Wingman's matching rules at that time. They do not confirm that a person remains assigned, fit, available, contactable or authorised for a flight or duty.

Review each imported roster and verify material changes in official systems. Do not rely on a sync indicator, notification, match counter or live-data display as proof that operational information is current.

Operational Responsibility

You remain responsible for aviation regulations, employer policies, roster changes, operational notices, reporting, duty limitations, fatigue requirements and payroll verification. Wingman does not replace professional judgement or company procedures.

Data and Statistics

Statistics generated by Wingman, whether personal, aggregated or global, are informational and may be incomplete, estimated or affected by the available dataset. They must not be treated as official operational, safety, industrial, regulatory or workforce records without independent validation.

Updates and Reporting

Airline formats, external services and operational systems evolve. Changes may temporarily affect Wingman until an update is released. Report suspected errors through the support options in the App and continue to use official systems while an issue is investigated.

Our Commitment

We aim to improve Wingman, respond to reported issues, communicate important limitations, protect privacy and provide a reliable experience. Software should support crew, not replace the official systems, procedures and professional judgement on which safe operations depend.
