

Wingman Privacy Policy

Last Updated: 7 September 2026

1. Introduction

Wingman ("Wingman", "the App", "we", "our", or "us") is committed to handling personal information responsibly. This Privacy Policy explains the categories of information Wingman may collect or receive, how that information may be used, stored, disclosed and protected, and the choices available to you.

Wingman includes connected services used across supported iPad and mobile apps. Those services currently use Google Firebase infrastructure and may use other suitable service providers as Wingman evolves.

2. Information We Collect

The information collected depends on the features you use and the permissions you select. It may include:

- Account and identity information, such as your email address, authentication provider identifiers, Wingman User ID and account type.
- Profile information, such as your name, rank, base and other settings you choose to provide.
- Roster and work information, including imported roster content, flights, duties, training, leave, layovers, locations, times, historical changes and related source information.
- Pay and configuration information, including calculation settings, deductions, allowances and generated payslip snapshots where those features are used.
- Social and sharing information, including friends, friend requests, pairing activity, public profile fields, roster-sharing permissions, crew-matching preferences and matching indexes or results.
- Device and synchronisation information, including device identifiers, app variant, selected master device, sync manifests, receipts, timestamps, content signatures and delivery state.
- Support information you submit, such as messages, screenshots, roster samples, diagnostic files and feedback.
- Technical, security and usage information that may be generated when connected services are used, such as IP address, app and operating-system version, request metadata, errors, performance information and security events.

Please avoid importing or submitting information that is not reasonably necessary for your use of Wingman. Roster files may contain information about other crew members or third parties; you are responsible for ensuring that you are permitted to provide that information.

3. Local and Cloud Storage

Wingman stores some information locally on your device. If you create or sign in to a Wingman Account, or use a connected feature, relevant information may also be transmitted to and stored or processed through cloud services.

Cloud-connected information may include rosters and their sync manifests, account and profile information, privacy permissions, device state, payslip bundles, friend and request records, public profile fields, and data needed to provide flight, crew or layover matching. The exact information depends on your app version, device role, account type, settings and feature use.

Disabling a particular sharing feature limits the related sharing or matching activity, but does not necessarily delete account, security, sync or previously stored information. Some core account and synchronisation processing is necessary to provide Wingman Account services.

4. How We Use Information

We may use information where reasonably necessary to operate, secure, maintain and improve Wingman, including to:

- authenticate users and administer Wingman Accounts;
- synchronise information between authorised devices and resolve conflicts;
- display, interpret and calculate roster, pay and statistical information;
- provide user-selected sharing, friendship, crew-matching, layover-matching, notification and connected features;
- detect misuse, investigate security events, prevent duplicate or stale data and maintain service integrity;
- provide support, diagnose faults, test compatibility and improve parser accuracy, performance and reliability;
- develop, evaluate and operate new features and services; and
- comply with legal obligations and protect the rights, safety and security of Wingman, its users and others.

5. Aggregated Statistics, Analytics and Product Research

Wingman may create and use aggregated, statistical or de-identified information derived from roster, flight, duty, layover, pay, feature-use and technical information. This may be used to understand broad patterns, produce global or regional statistics, improve calculations and services, conduct product or operational research, identify trends and communicate insights.

We will not publish raw personal rosters or statistics that are intended to identify an individual. Where information could reasonably be re-identified, we will continue to treat it as personal information and apply this Policy. Information that has been aggregated or de-identified so that it no longer reasonably identifies an individual may be retained and used for these purposes, including after account deletion.

Wingman may introduce more detailed controls or notices for particular analytics activities where appropriate or required by law. This section is intended to describe permitted categories and purposes generally and is not limited to analytics features available in the current version.

6. Sharing and Disclosure

We do not sell or rent personal information. Information may be disclosed or made available:

- to people you choose to connect or share with, subject to the relevant privacy and matching settings;
- to service providers that host, process, secure, monitor or support Wingman;
- to Apple for App Store subscription and platform services;
- where required or authorised by law, legal process or a regulator;
- to investigate misuse or protect the rights, safety or security of Wingman, users or the public; or
- as part of a business transfer, restructuring or succession, subject to appropriate safeguards.

Crew-matching features may allow participating signed-in users who are not friends to discover that another participating user is assigned to the same eligible flight. Friend-based features may disclose additional shared flight, roster or layover information according to the applicable permissions. The App's current controls and screen descriptions provide more detail about a particular sharing choice.

7. Firebase and Other Service Providers

Wingman currently uses Google Firebase services, which may include Firebase Authentication, Cloud Firestore and Cloud Functions, to provide authentication, database storage, synchronisation, server-side processing, account cleanup, matching and related security or reliability functions. Google generally processes customer data on behalf of Firebase customers under its applicable terms. Google and other providers may also process service and diagnostic data under their own terms and privacy policies.

We may replace, add or remove infrastructure providers where reasonably necessary to operate or improve Wingman. Providers are given access only as reasonably necessary for their role, subject to applicable contractual, legal and security requirements.

8. International Processing

Cloud information may be stored or processed in Australia, the United States and other countries where Google or other service providers operate. Firebase Authentication is operated from United States data centres, and other Firebase services may use selected regional or global infrastructure.

Privacy and data-protection laws in those locations may differ from those in your location. Where required, we take reasonable steps to use providers and arrangements intended to protect information processed overseas.

9. Security

We use reasonable administrative, technical and product safeguards designed to protect information from misuse, interference, loss and unauthorised access, modification or disclosure. These may include authenticated access, access-control rules, server-side validation, encryption in transit and provider encryption at rest.

No electronic transmission or storage system is completely secure. You are responsible for protecting your device, account credentials and access to your email or authentication provider, and for signing out or deleting data when a device is no longer under your control.

10. Retention and Deletion

We retain information for as long as reasonably necessary to provide the relevant services, maintain security and integrity, resolve disputes, comply with law and support legitimate business purposes described in this Policy.

You may remove individual local or synchronised items using available App controls. You may request deletion of your Wingman Account and associated cloud data through available account controls or by contacting support. Account deletion is intended to remove account-linked Firebase records, including matching and social records, but completion may take a reasonable period and residual copies may remain temporarily in backups, logs or systems used for security and legal compliance.

Signing out is not the same as deleting an account. Uninstalling the App generally removes local app data from that device but does not itself delete cloud data. Aggregated or de-identified information that no longer reasonably identifies you may be retained.

11. Access, Correction, Complaints and Choices

Depending on applicable law, you may request access to, correction of or deletion of personal information we hold about you, withdraw an optional permission, or ask how information has been handled. Some profile, privacy and sharing choices can be managed directly in the App.

Privacy questions, requests or complaints may be sent to yan.shurunov@gmail.com. Please provide enough information to identify the relevant account and request. We may need to verify your identity before acting. We will consider and respond within a reasonable period.

12. Children's Privacy

Wingman is intended for airline crew and adult family users and is not directed to children under 16. We do not knowingly collect personal information from children contrary to applicable law. If we become aware of such collection, we will take reasonable steps to delete the information.

13. Changes to this Policy

We may update this Privacy Policy as Wingman, its connected services and legal requirements evolve. Material changes may be communicated through the App or another appropriate method and may require renewed acknowledgement. The current version is available within the App.
